

Evangelism Coordinator

Depending on the volunteers available, this may be part of the Campaign Directors role to oversee the evangelism of the patients with the help of a coordinator for the youth and children. The goal of the Evangelism Coordinator is to ensure that every patient that receives medical care, has the opportunity for evangelism if they would like to talk with someone. The evangelism locations are divided into two locations, one is where the patients are waiting to receive medical treatment and the second area is where the youth and children gather for activities.

The best preparation you can have for this role is to have a heart for people and be open to share your faith. In many cases this was the first time some of our volunteers have witnessed with such a focused evangelism approach and praying with someone to receive Christ.

Tools that have been effective include the use of the “EvangeCube”. For detailed training on how to effectively use the EvangeCube, we suggest visiting the official website.

www.evangelcube.org

On the site there is a very helpful presentation that explains the components of the Evangelcube, and the intended truths that accompany each panel. Below is a link directly to this presentation..

www.evangelcube.org/rstore/evangelcube.html

There will be local volunteers available to serve as interpreters.

You will feel better prepared if you understand the beliefs of the majority of the people of the region that you are planning to visit. For example, information about Eastern Orthodox beliefs and appropriate questions and scripture references to assist you can be found in the Leadership Training portion of this Toolbox.
